
Open Research Data Management: policies and tools

Open Research Data Management: policies and tools

May 24-25

Milano, Università Statale

Sarah Jones - Abstract

This session will introduce participants to Data Management Plans and provide practical suggestions on how they can be used to support research. The initial overview will explain what DMPs are and why they are useful. A vision of a future world where the DMP is connected to other research systems and tools will also be provided. Participants will brainstorm how DMPs fit into the research ecosystem at their own institution, and share the requirements they have for tool providers like the Digital Curation Centre and California Digital Library. Advice on what to do next and how to engage in international initiatives in this area will close the session
